1- Update here because id can,t dealwith spaecs btw words

old

```html
234    <table style="padding: 0px;width:100%;text-align: left;font-size: 17px;font-weight: 600;color: #33304d;">
235        <tr>
236            <td>Massage Therapy</td>
237            <td style="padding-left: 10px;" id="massage therapy"></td>
238        </tr>
239        <tr>
240            <td>Chiropractic Care</td>
241            <td style="padding-left: 10px;" id="chiropractic care"></td>
242        </tr>
243        <tr>
244            <td>Yoga Exercise</td>
245            <td style="padding-left: 10px;" id="yoga exercise"></td>
246        </tr>
247        <tr>
248            <td>Other</td>
249            <td style="padding-left: 10px;" id="other"></td>
250        </tr>
```

```javascript
386    let slightlyConcerned = votes.find(vt => vt._id == "slightly concerned");
387    let notConcerned = votes.find(vt => vt._id == "not concerned");
388    // => {name: "Albania", code: "AL"}
389    window.document.getElementById('somewhat concerned').innerHTML = (somewhatCor
390    window.document.getElementById('very concerned').innerHTML = (veryConcerned
391    window.document.getElementById('slightly concerned').innerHTML = (slightlyCor
392    window.document.getElementById('not concerned').innerHTML = (notConcerned ?
393
```

Update

```html
235        <tr>
236            <td>Massage Therapy</td>
237            <td style="padding-left: 10px;" id="massage_therapy"></td>
238        </tr>
239        <tr>
240            <td>Chiropractic Care</td>
241            <td style="padding-left: 10px;" id="chiropractic_care"></td>
242        </tr>
243        <tr>
244            <td>Yoga Exercise</td>
245            <td style="padding-left: 10px;" id="yoga_exercise"></td>
246        </tr>
247        <tr>
248            <td>Other</td>
249            <td style="padding-left: 10px;" id="other"></td>
250        </tr>
251    </table>
```

```javascript
387    let notConcerned = votes.find(vt => vt._id == "not concerned");
388    // => {name: "Albania", code: "AL"}
389    window.document.getElementById('yoga_exercise').innerHTML = (somewhatCor
390    window.document.getElementById('other').innerHTML = (veryConcerned ? (Ma
391    window.document.getElementById('chiropractic_care').innerHTML = (slightl
392    window.document.getElementById('massage_therapy').innerHTML = (notConcer
393
```

2- Change to the localhost serve link, in case you hosting the project in aws you put your serve link
And also add email variable to send with request to store it in database
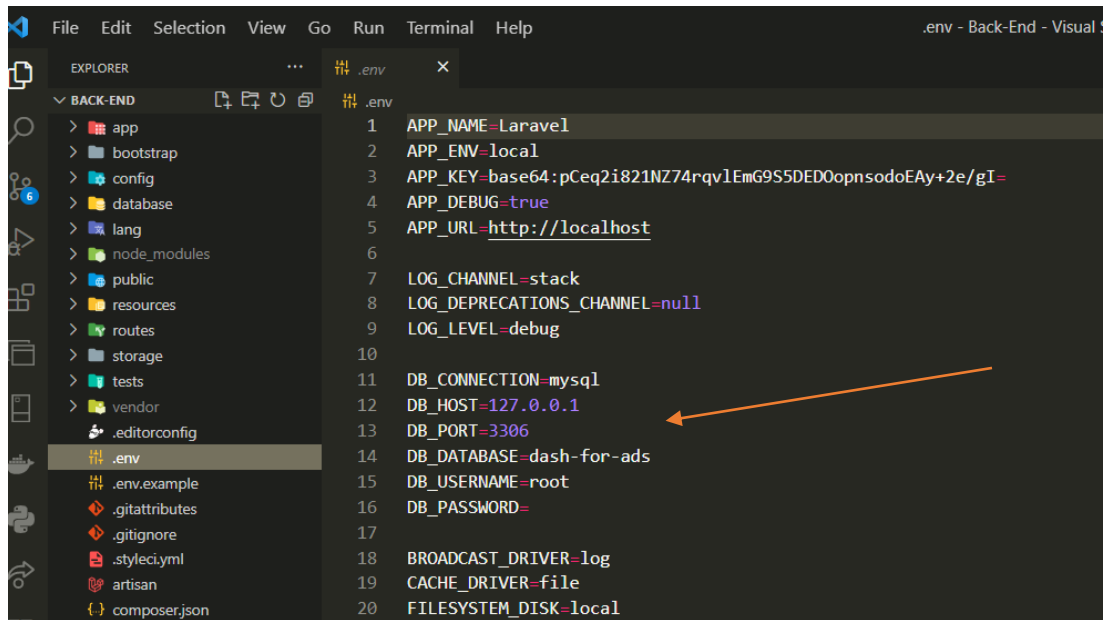

Old

```
320
321             if (result !== null) {
322
323                 fetch('https://api-dot-widget-testing.uc.r.appspot.com/isEmailSubmitted',
324                 {
325                     method: 'POST',
```

```
328             },
329             body: JSON.stringify({
330                 campaign: "5ee24bbe9ecceb2c3857eae6", // general
331                 regularId: "60689b344bff833959a9c3c7", // regular Bank
332                 choosenOption: choosenOption,
333                 isEmailSubmitted: 1,
334                 date: new Date()
335             })
336         })
```
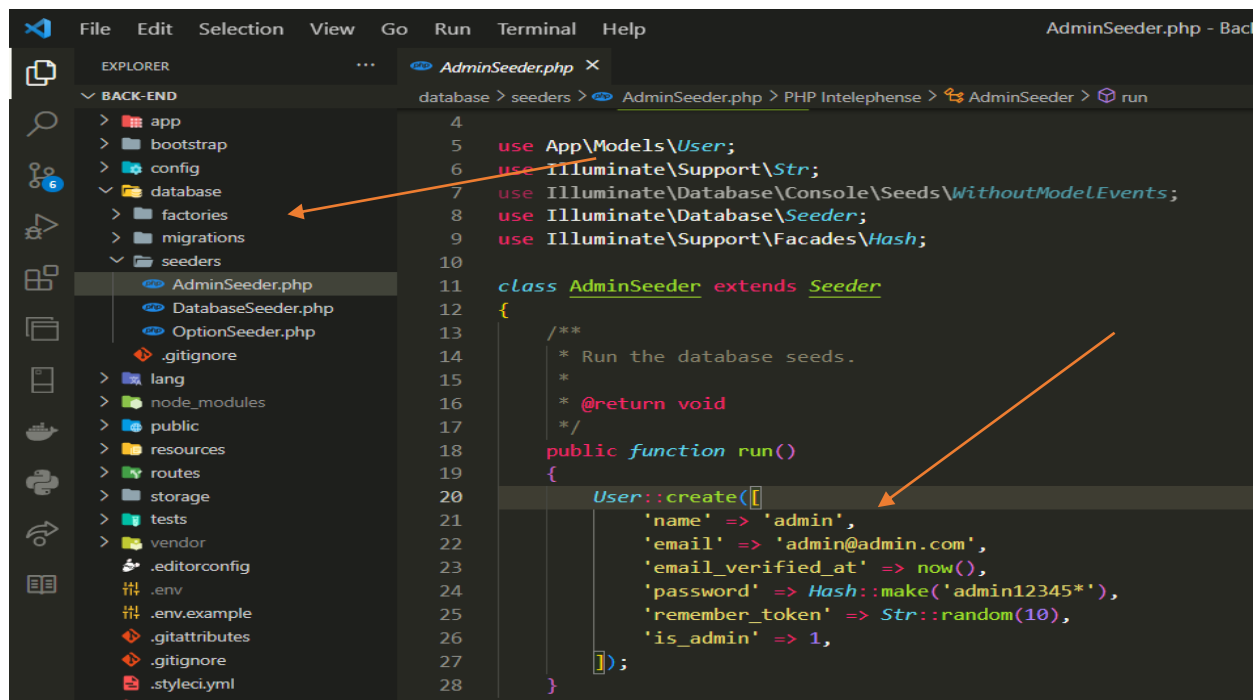

```
354         }
355
356         let success = window.document.getElementById('success');
357
358         function castCampaignVote(choosenOption) {
359             fetch('https://api-dot-widget-testing.uc.r.appspot.com/campaignVoteSubmit',
360             {
361                 method: 'POST',
362                 headers: {
```

Update

```
360
361         if (result !== null) {
362             //let _oldURL = 'https://api-dot-widget-testing.uc.r.appspot.com/isEmailSubmitted';
363             fetch('http://localhost:8000/api/option/user', {
364                 method: 'POST',
365                 headers: {
366                     'Content-Type': 'application/json'
367                 },
368                 body: JSON.stringify({
369                     campaign: "5ee24bbe9ecceb2c3857eae6", // general
370                     regularId: "60689b344bff833959a9c3c7", // regular Bank
371                     choosenOption: choosenOption,
372                     isEmailSubmitted: 1,
373                     email: emailInput.value,
374                     date: new Date()
375                 })
376             })
```

```
396
397         function castCampaignVote(choosenOption) {
398             //let oldURL = 'https://api-dot-widget-testing.uc.r.appspot.com/campaignVoteSubmit';
399             fetch('http://127.0.0.1:8000/api/option/store', {
400                 method: 'POST',
401                 headers: {
402                     'Content-Type': 'application/json'
403                 },
404                 body: JSON.stringify({
405                     id: "5ee24bbe9ecceb2c3857eae6"  // general
```

For back end

- Make sure with database name , after creating your database
- Put database name and your server datahere

- You can change admin data from here before do anything

- Once you publish the project only way to change admin data from database itself

- **After that run this command**
  - ○ **composer update**
  - ○ **php artisan migrate:fresh –seed**
- **after all of this before work on your dashboard make sure that options table have one record**

---

that's all what I need to tell you, and I'm here if you want anything 😊
